

Make sure the user is entering a right input in python

Using a While Loop and Exception Handling:

Place the input method inside a while loop.

Use try and except to catch exceptions (e.g., invalid input).

If an exception occurs, prompt the user again.

Break out of the loop when valid input is received.

How to make do while loop by python?

In [61]:

```
while True:
    try:
        age = int(input("Please enter your age: "))
    except ValueError:
        print("Sorry, I didn't understand that. Please enter a valid integer.")
        continue
    else:
        break

if age >= 18:
    print("You are able to vote in the United States!")
else:
    print("You are not able to vote in the United States.")
```

```
Please enter your age: 20
You are able to vote in the United States!
```
